

WEEK 1: INTRO TO PT & MED TERM

HISTORY & CONTEXT OF PHYSICAL THERAPY

Physical Therapy

- A field in medicine which helps individuals to recover from an accident or injury through various exercises, massages, and treatment
- Confusion arises regarding the meaning of this because of legal definition from state to state
 - the **Board of Directors of the APTA** (APTA) created the *Physical Therapy Scope of Practice (PTSP)* to avoid confusion

History of Physical Therapy

- Used in ancient civilization to relieve pain and improve function
- **Massage** was used by Chinese in 3000 BC, described by Hippocrates (Father of Medicine) in 460 BC, modified by Romans, and accepted by a scientific procedure in the *early 1800*
 - Techniques of neuromuscular muscle reeducation developed
- **Hydrotherapy** was practiced by the Greeks and Romans through the use of the baths and river worship
- **Electrotherapy** began in the 1600s with the introduction of electricity and electrical devices
- **Acupuncture, acupressure, and Tai Chi** (physical exercise) began in China
- In 1800, more PT techniques were practiced in Europe, specifically in England and France
- Polio outbreak and World War I brought about the use of PT in the United States

IMPACT OF WORLD WAR I AND POLIO

- The outbreak of World War I gave the reason to the Surgeon General of United States to send a group of physicians to England and France to learn about PT techniques for the better management of the wounded
 - As a result, the **Division of Special Hospitals and Physical Reconstruction (DSHPR)** was created in 1917
 - Trained and managed reconstruction aides, that are exclusively run by women, to provide physical reconstruction to those injured
 - **Women** are the forerunners of PT in the United States

- During the period of world war, polio (*virus in the gray matter of brain and SC*) epidemics were occurring in Vermont
- *Vermont plan* was developed to study the cause and effects of the disease
 - Team visits happened to provide care for polio victims
 - Teams consists of orthopaedic surgeons, public health nurses, physiotherapists (physicians' assistant), brace makers, and stenographers

POST-WORLD WAR I PERIOD

- The reconstruction aides were left by confusion as to what their roles and responsibilities are called
 - Brought the need of identity through national organization
 - A military physician called a meeting for the people involved in "physical therapeutics"
 - Meeting happened on *January 15, 1921*, at Keen Chop House in New York City
 - Attended by 30 reconstruction aides and 5 physicians
 - After this meeting, **American Women's Physical Therapeutic Association (AMWPTA) was made** - national organization
 - Renamed **American Physiotherapy Association (APA)**

Mary McMillan

- First president
- First "PT" in the United States
 - Under the presidency of McMillan, *membership within the organization were established: charter members (reconstruction aides), and active members*
 - **P.T. Review** is the official journal, established and published in 1921
 - Retitled **Physiotherapy Review**

IMPACT OF WORLD WAR II AND POLIO

- Proposed curriculum for PT: 9 months with 12 total clock hours (1928)
- National Foundation for Infantile Paralysis (1938)

WEEK 1: INTRO TO PT & MED TERM

- With the polio epidemic, the **March of Dimes** was named by Eddie Cantor, and was established by Franklin D. Roosevelt

- A nonprofit organization that helped fight polio but now focuses on improving the health of mothers and babies by ending preventable maternal and infant death and illness

POST-WORLD WAR II PERIOD

- U.S. Army needs to retain PTs to provide service for military personnel

- As a result, the **Women's Medical Specialist Corps (WMSC)** was established *in 1947*

- Consists of *PTs, OTs, and dietitians*
- **Emma Vogel** - first chief of the Corps and was accorded the rank colonel
- Became the **Army Medical Specialist Corps (AMSC)** *in 1955 - both men and women*

- **Gamma globulin and Salk vaccine** - treatment for polio found during the war by Jonas Salk

- PTs are now established as practitioners of physical therapy. Because of this...

- *In 1947*, the national organization for physical therapists changed its name to **American Physical Therapy Association (APTA)**

1960s THROUGH 1980s

- *In 1960*, opened an APTA policy, declaring the *baccalaureate degree to be the minimum requirement for a PT*

- *In 1970*, became clear that postbaccalaureate degree would be necessary
- APTA adopted a critical policy (*amended in 1980*) stating that new PT programs must award a postbaccalaureate degree by **December 31, 1990**

- *In 1978*, **Commission on Accreditation in Physical Therapy Education (CAPTE)** was established

- In the same year, it was recognized as an accrediting agency

- *In 1978*, APTA created the **American Board of Physical Therapy Specialties (ABPTS)**, which allowed PTs to earn certification in specific areas of expertise

1990s

- Cost of health care is too high, resulting to significant cost control measures in the private and government sectors

- Affected by new systems for financing and the **Balanced Budget Act of 1997** (new method of financing)
- Job opportunities (more graduates) and salaries became low
- By the end of the decade, large amount of PTs were predicted and unemployment will continue

- Because of this, *fewer people wanted to apply PT and PTA programs* because of limited job opportunities
- APTA suggested to stop opening education programs

- Growing push for research to back-up the benefits of PT because insurance companies and other third-party payers began requiring proof

- In response, *in 1995*, the **Guide to Physical Therapist Practice (GPTP)** was first published to provide a thorough outline of PT services
 - **Clinical Research Agenda (CRA)** was made because they need to approve the effectiveness of the services
- **The Hooked on Evidence (THE)** program was developed to provide an easy to use database of the latest research relevant to PT

21st CENTURY

- *In 2000*, APTA House of Delegates adopted **APTA Vision Statement for Physical Therapy 2020 (commonly cited as Vision 2020)**

- Components addresses the areas of practice, education, and research: autonomous practice, direct access, doctor of PT, evidence-based practice, professionalism

- *In 2014*, direct access to PT became legal in **all 50 states of America** and the **District of Columbia**

- Due to Vision 2020, change from PT education to Doctor of PT degree happened

- *In 1996*, first DPT graduates came from Creighton University
- New graduates began seeking further education and training to maintain their expertise
 - **American Board of PT Residency and Fellowship Education (ABPTRFE)** was established to review and accredit advanced training programs

- Hooked on Evidence program *became open to nonmembers of APTA* (only limited article searches)

WEEK 1: INTRO TO PT & MED TERM

- **Open Door (became Article Search)** program was made for extensive article searches

HISTORY OF PHYSICAL THERAPY IN THE PHILIPPINES

1962 - UP College of Allied Medical Professions opened the first BSPT program

1964 - **PPTA** founded by UP graduates

1967 - PPTA joined the World Confederation for PT

1969 - **RA 5680** (Philippine Physical and Occupational Therapy Law, 1969) - to practice PT or OT, they must pass licensure exam and register with Board, which, under the Professional Regulation Commission (PRC)

- If failed to comply: If failed to comply: fine of ₱20,000-₱50,000, imprisonment of 2-5 years

1978 - PPTA accredited by PRC

1998 - **National PT Day** (September 8)

2019 - **RA 11241** (Philippine Occupational Therapy Law, 2018) - Same as RA 5680, but more centralized to OT (must have an OT degree, citizenship. and moral integrity)

- **If failed to comply:** fine of ₱20,000-₱50,000, imprisonment of 2-5 years
