

WEEK 11 to 15: INTRO TO PT & MED TERM

INTRODUCTION TO PT CLINICS IN THE PHILIPPINES

1st step: triage or register (nurse, clerks)

- Demographics, referring doctor, informant (exclusive for geria and pedia), room number, patient number

- **Chief complaint (CC)**
 - Main problem/report
 - Pain scale
 - Verbatim of the patient
 - Followed by PT translation
- **Onset**
 - When it started (beginning)
- **Mechanism of injury (MOI)**
 - How it began/started

2nd step: initial evaluation (S)

- First contact with patient

3rd step: assessments

- 1.) Ancillary procedures (S)
 - CT scan
- 2.) Medications (S)
 - Losartan, acetaminophen, tapazole
- 3.) PMHx (S)
 - HTN, goiter, DM, CVD, OA, RA, CP conditions, Ca
- 4.) FMHx
 - HTN, goiter, DM, CVD, CP conditions
- 5.) Vital sign (O)
 - BP, HR, RR, O2 saturation, temperature
- 6.) Ocular inspection (O)
 - Observation through naked eye
 - Ectomorph, bed-borne upon arrival, drooling, goiter, A/C/C
- 7.) Palpation (O)
 - Skin turgor, edema, spasticity
- 8.) Neurological assessment (A)
 - MMT, gait & ADL analysis, CP assessment

4th step: plan of care (POC)

- PT impression (P)
 - Findings, outcome, rehab potential, significance,
- PT management (P)
 - GPS, ES, AAROM, PROM
- HEP (P)
- Recommendation (P)

5th step: treatment session or intervention

- Modalities: TENS, FES, cold/hot packs
- Therapeutic exercises: balance drills
- Manual therapy
- Gait training

6th step: progress monitoring

- Through progress notes (SOAP)

7th step: reevaluation

- Checking for Improvement and changes of plan or treatment
- Referral

8th step: discharge or follow-up

- Final outcome
- Home exercise program (HEP)
- Recommendation and follow-up care

WEEK 11 to 15: INTRO TO PT & MED TERM

CLINIC MANAGEMENT

1.) Scheduling system

2.) Staff roles

- PT aide: prepares and manages the post-care of PT equipments
- Admin staff
- Rehab doctor

3.) Inventory and equipment management

4.) Reporting and compliance

- Handled by:

- DOH accreditations
- CHED: if school-based PT
- PhilHealth: recently
- PRC

5.) Quality assurance

4.) Endorsement notes - end of rotation; endorsement of patient; transfer of PT

5.) Daily PT notes - bulletin board

NEW PT TERMINOLOGIES

- 1.) Aggravate & relieving
- 2.) c - with
- 3.) s - without
- 4.) C/C or CC - chief complaint
- 5.) % - complaints of
- 6.) MOI - mechanism of injury
- 7.) HPI - history of present illness
- 8.) PMHx - past medical history
- 9.) FMHx - family medical history
- 10.) LOM - limited range of motion
- 11.) B/T - balance & tolerance
- 12.) LTG - long-term goal
- 13.) STG - short-term goal
- 14.) aTx - before treatment
- 15.) pTx - after treatment
- 16.) OI - ocular inspection
- 17.) GPS - gentle passive stretching
- 18.) POC - plan of care
- 19.) IE - initial evaluation
- 20.) PSEHx - past surgical history
- 21.) VS - vital sign
- 22.) Ca - cancer
- 23.) A/C/C - active - coherent - cooperative

PT DOCUMENTATION

- 1.) Initial evaluation (IE) - with HPI
- 2.) Initial PT notes - without HPI
- 3.) Progress notes - improvements, treatments, pain scale, goals achieved

WEEK 11 to 15: INTRO TO PT & MED TERM

PT SPECIALIZATIONS

1.) Orthopedic PT — MSK conditions

- Patients with:

- Fx; sprains; strains; LBP; neck pain; post-surg rehab; ACL, RCT, & joint replacements; tendinopathies, frozen shoulders

- Intervention:

- Manual therapy; mobility & flexibility training; pain management strategies; MMT; STM; gait deviation; ROM

2.) Neurological PT — nervous system disorders

- Patients with:

- CVA; TBI; SCI; PD; MS; PD; spasticity (paralysis); motor control issues; atrophy (shrinking of muscle due to muscle disuse); balance deficit; functional limitation as a whole

- Intervention:

- Balance and coordination training; gait training (w/ or w/o AD); ADLs; transfers

3.) Pediatric PT — infants, children, adolescents

- Patients with:

- Developmental delays, CP, MD, autism spectrum

- Intervention:

- Gross motor skill training; gait training; play-based functional training; family and caregiver education
- Achieve age-appropriate milestone

4.) Geriatric PT — older adult population

- Patients with:

- OA; osteoporosis; balance & fall risk; post-surg; motor decline; chronic illness rehab; dementia-related mobility issues; PD; Alzheimer's

- Intervention:

- Fall prevention; mobility, strength, endurance & balance training; patient education

5.) Cardiopulmonary PT

- Patients with:

- Post-myocardial infarction; pneumonia; heart failure; post-CABG; COPD; asthma; post-thoracic surgery; cystic fibrosis; burn

- Intervention:

- Endurance training; vital sign monitoring (RR & O2 sat); breathing exercises; cardiac rehab I-III; airway clearance techniques

6.) Sports PT — athletes, active individuals, general health optimization

- Patients with:

- Sports injuries (ACL tear, ankle sprains, RCT); performance deficit, injury prevention

- Intervention:

- Conditioning, strengthening, & plyometric exercises; agility training; injury prevention; dynamic (pre-game) & static (post-cooldown) stretching; return-to-play program

7.) Integumentary PT

- Patients with:

- Burn; diabetic wound; pressure ulcer; pressure ulcer

- Intervention:

- Wound care

WEEK 11 to 15: INTRO TO PT & MED TERM

BODY SYSTEMS

1.) Integumentary system

- Function: first line of defense; protection; sensation; temperature regulation; vitamin D synthesis
- Components: skin (largest organ externally); nails; hair; glands
- Layers:
 - Epidermis - outermost, avascular layer; protection & regeneration
 - Dermis - vascular layer; glands & hair follicles for sensory function
 - Subcutaneous tissue - stores fat; energy insulation
- Common condition: pressure ulcer; psoriasis; dermatitis; burn

2.) Skeletal system

- Function: structural framework; support & protection; movement production; blood cell formation; mineral storage
- Components: skull, vertebral column (supports body weight & flexibility), ribs & sternum; U & L limb; joint (point of articulation); ligament (bone-to-bone)
- Kinds: long, short, irregular, flat
- Types:
 - Compact bone - strong, dense
 - Spongy bone - trabeculae containing red bone marrow; end of long bones (epiphysis)
- Common conditions: falls; TBI; vehicular accidents; SCI; LBP (lumbar stabilization); postural problems; OA (degeneration of articular cartilage); sprain (ligament injury); osteoporosis (low bone density); Fx

3.) Muscular system

- Function: maintains posture (NMRE)
- Components: muscle, tendon (connects muscle-to-bone)
- Kinds:
 - Skeletal - voluntary; striated; controlled by SNS
 - Cardiac - involuntary; striated
 - Smooth - involuntary; non-striated; influence BP during exercise
- Common conditions: strain (muscle fiber injury); tendonitis; MD (muscle weakness; can be neurological)

4.) Nervous system

- Function: master control; communication network
- Types:

- CNS - brain (coordination, cognition, movement control) & SC (pathway between brain & body; movement command; reflexes)
- PNS - spinal & cranial nerves; ganglia
- ANS - sympathetic & parasympathetic
- Common conditions: CVA, TBI, peripheral neuropathy; PD (movement disorder); CP (motor development issue)

5.) Endocrine system

- Function: communicates via hormones; metabolism; growth & development; reproduction; stress responses
- Kinds:
 - Pituitary gland - base of the brain; master gland; growth
 - Thyroid gland - neck; metabolism
 - Adrenal gland - above the kidney; stress hormone
- Common conditions: hypothyroidism (fatigue; low exercise tolerance); hyperthyroidism; DM; Cushing's syndrome (high cortisol)

6.) Cardiovascular system

- Function: transporting oxygenated blood; removing wastes
- Components: heart, BVs, & blood
- Common conditions: HTN; heart failure

7.) Lymphatic system — immune system

- Function: return fluid
- Components:
 - Lymph node - filter pathogen
 - Spleen - filter blood
 - Thymus - immunity
- Common conditions: autoimmune diseases; lymphedema (massage; stretching)

8.) Digestive system

- Function: process food (ingestion & digestion)
- Components: mouth; pharynx; esophagus; stomach (breaks food); small (absorbs nutrients) & large (H₂O reabsorption) intestine; liver, pancreas & gallbladder (enzymatic breakdown)
- Common conditions: peptic ulcer; bowel mproblem; GERD; constipation; diarrhea

9.) Urinary system

- Function: maintains H₂O, fluid, & electrolyte balance (through filtration, absorption, & secretion)

WEEK 11 to 15: INTRO TO PT & MED TERM

- Components: kidney, ureter, urinary bladder, urethra
- Common conditions: UTI; kidney stones; incontinence (pelvic floor rehab)
