

ORGAN SYSTEM ANATOMY (KAHOOT)

NEUROANATOMY | OPHT 1-1 | PRELIMS

By Accel Jimenez

NEURO EASY ROUND

1. Spinal cord segment that control the arms is the: **cervical**
2. The dorsal root of a spinal nerve carries: **sensory signals to the CNS**
3. Ventral root of a spinal nerve carries: **motor signals to the muscles**
4. The part of the CNS that relays sensory information to the cerebral cortex: **Thalamus**
5. Part of the brain is affected if a patient cannot coordinate voluntary movements: **cerebellum**
6. Type of neurons that carries impulses away from the CNS: **efferent**
7. Cranial nerve for extraocular movement: **III**
8. Medulla oblongata controls: **Hr & respiration**
9. Not a component of CNS: **cranial nerves**
10. Thirst and hunger center: **hypothalamus**

NEURO MODERATE ROUND

1. Damage to the precentral gyrus primarily affects: **voluntary motor control**
2. Which cerebral artery is most likely involved in a patient with contralateral hemiplegia of the lower limb: **ACA**
3. Lesion in Broca's Area: **Speech production (expressive aphasia)**
4. Lesion in Wernicke's Area: **Inability to understand language (Comprehension)**
5. Cranial nerve has both sensory and motor functions related to the face: **VII**
6. Meningeal layer closest to the brain surface: **Pia Mater**
7. Lesion of the right cerebellar hemisphere: **Ipsilateral Ataxia and coordination problems.**
8. Ventricular system is responsible for: **Producing and circulating CSF**
9. Lesion in the left MCA (middle cerebral artery): **Contralateral upper limb and face weakness and sensory loss.**
10. The prefrontal cortex is involved in: **decision-making, planning, and personality.**
11. Circle of willis is located in: **base of the brain**

12. The internal carotid artery contributes blood to the circle of willis through: **Anterior cerebral artery and middle cerebral artery**
13. Artery that is not directly part of the circle of willis: **MCA**
14. Incomplete circulation of circle of willis: results in the kulang of blood flow

NEURO DIFFICULT ROUND

1. Lesion in Wernicke's Area: **Fluent but nonsensical**
2. A patient has visual deficits in both left visual fields: **BA 17**
3. Lesion in BA 5 & 7: **Loss of proprioception and kinesthesia.**
4. Lesion to Area 41 & 42: **Impaired hearing.**
5. Patient cannot recognize objects by touch despite intact sensation: Area 5&7
6. Lesion in the midbrain tectum (primitive brain): **Defective eye movement and visual reflexes**
7. A patient with loss of voluntary eye movement and ptosis: **Midbrain/ Oculomotor Nerve CN 3**
8. A patient presents with difficulty swallowing and hoarseness after a stroke. Which CN is affected?: **CN X**
9. Lesion in VIII: vertigo, hearing loss, and imbalance
10. Anosmia: **CN I**
